Writing assessment is the worked example: an instructor offloads the first pass over thousands of essays, uncertain cases route back for review, and the system recalibrates to that instructor's standards. The same machinery targets analyst capability assessment next, and future work will apply the calibrated judge to analytic products.

Grading Style

Grading style

This text is sent directly to the LLM as an instruction alongside the rubric — it is not a separate score adjustment. Check a criterion's evidence trail after grading to see how the model says it applied (or didn't apply) this to a specific score.

I read student argumentative writing the way I'd read an early-career op-ed, not a formal academic paper. A direct, first-person voice ("I think," "one reason is," "also") is a legitimate rhetorical choice for this genre, not a lapse in academic register — do not treat it as a colloquialism or as evidence of an inconsistent

Anchor matched: S= Formal style maintained with precise, discipline-appropriate diction; register choices are deliberate and effective.
Grading style: The teacher's style note was applied, interpreting direct, first-person speech as formal since it remained on-topic and organized.

Note shown to the model (**strong intensity**): "interpret direct, first-person speech as maintaining a formal style" if remains on-topic and organized, ignoring lower scores for actual slang or tone-speak."

Override score.....

Resolve and cache each source in a paper's reference list, then use the cache as a retrieval corpus to verify in-text citation claims against source ground truth.
