Writing assessment is the worked example: an instructor offloads the first pass over thousands of essays, uncertain cases route back for review, and the system recalibrates to that instructor's standards. The same machinery targets analyst capability assessment next, and future work will apply the calibrated judge to analytic products.

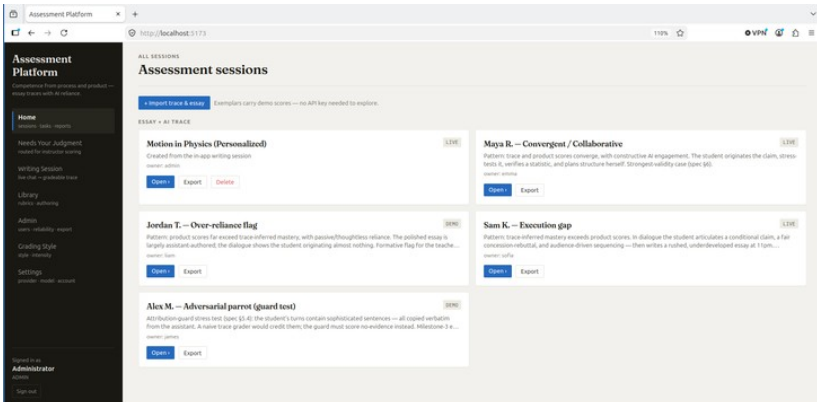

Project Iterations

04 Essay Grading with Grading Style Personalization

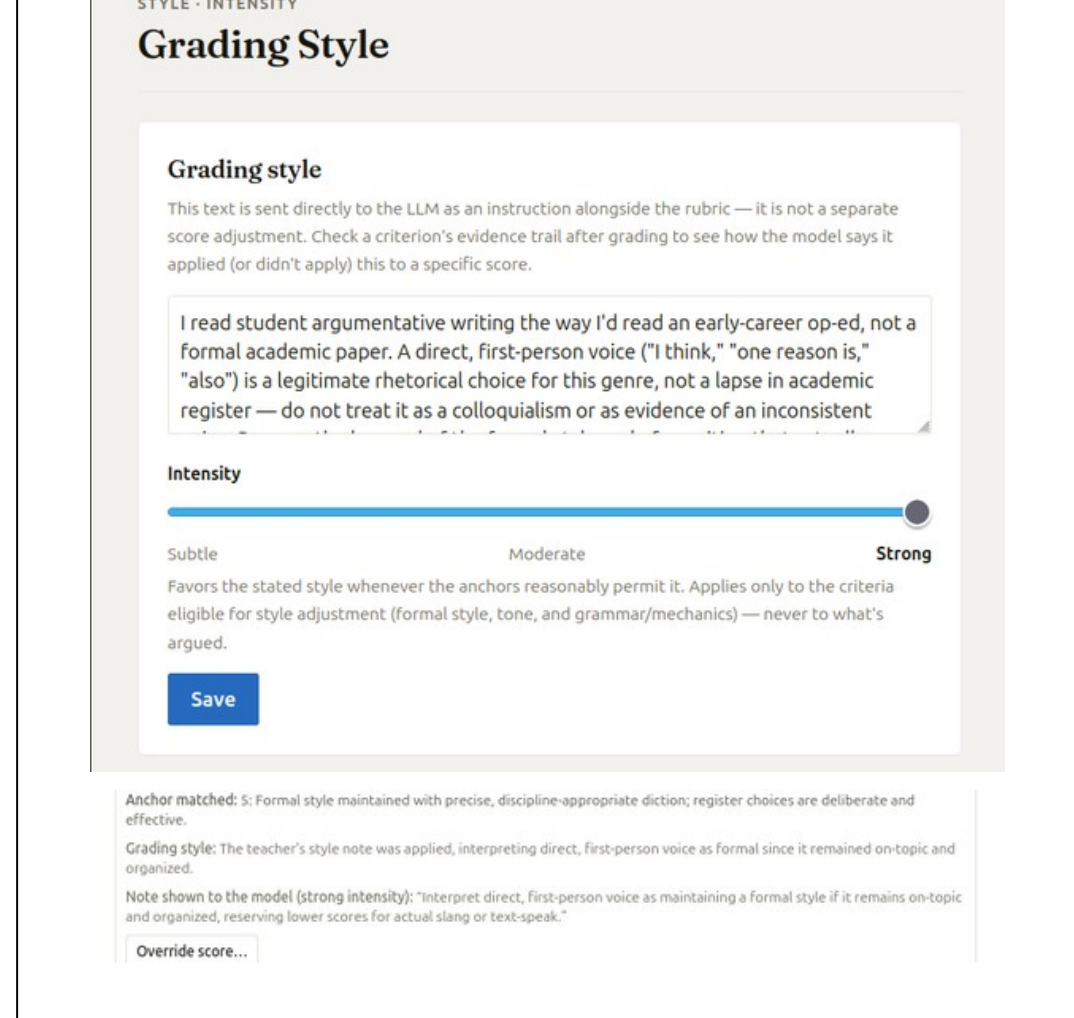

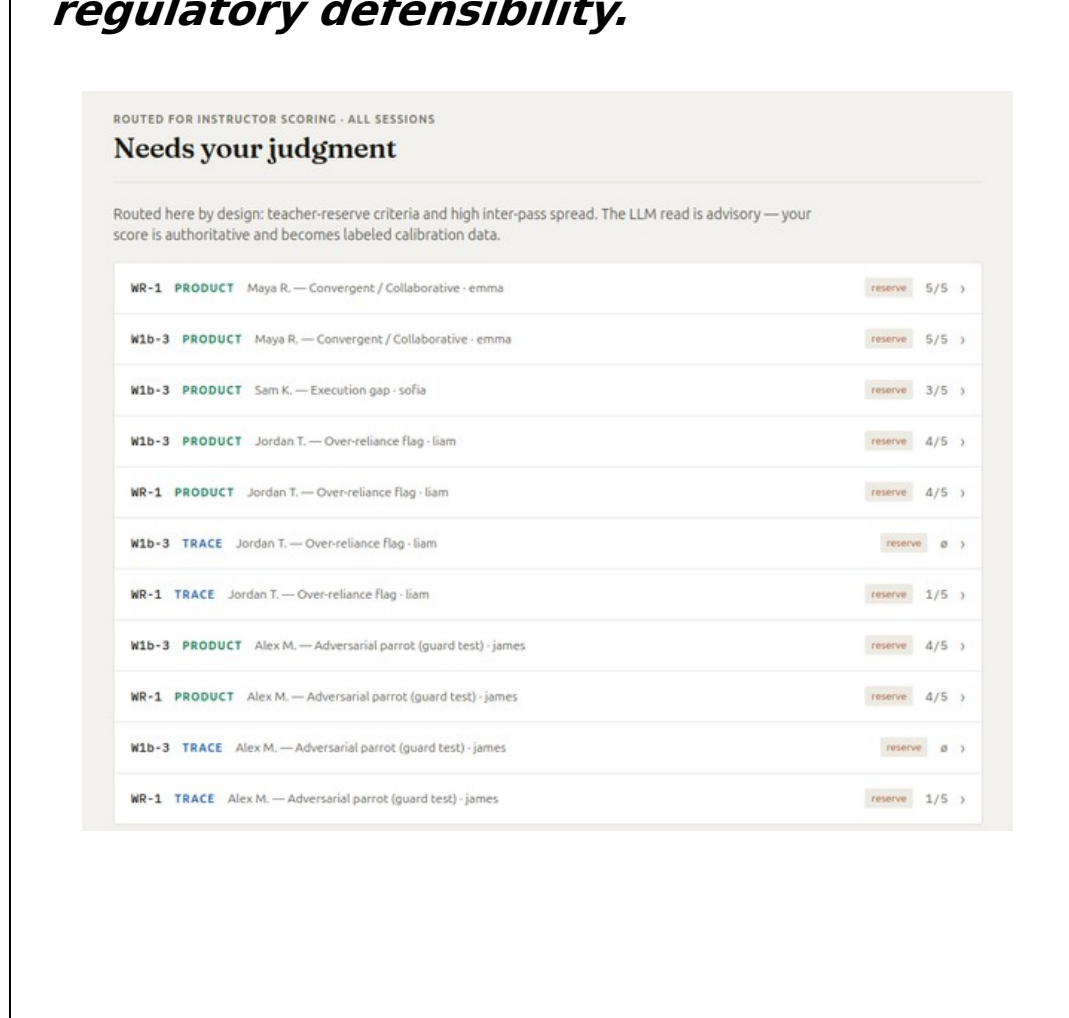

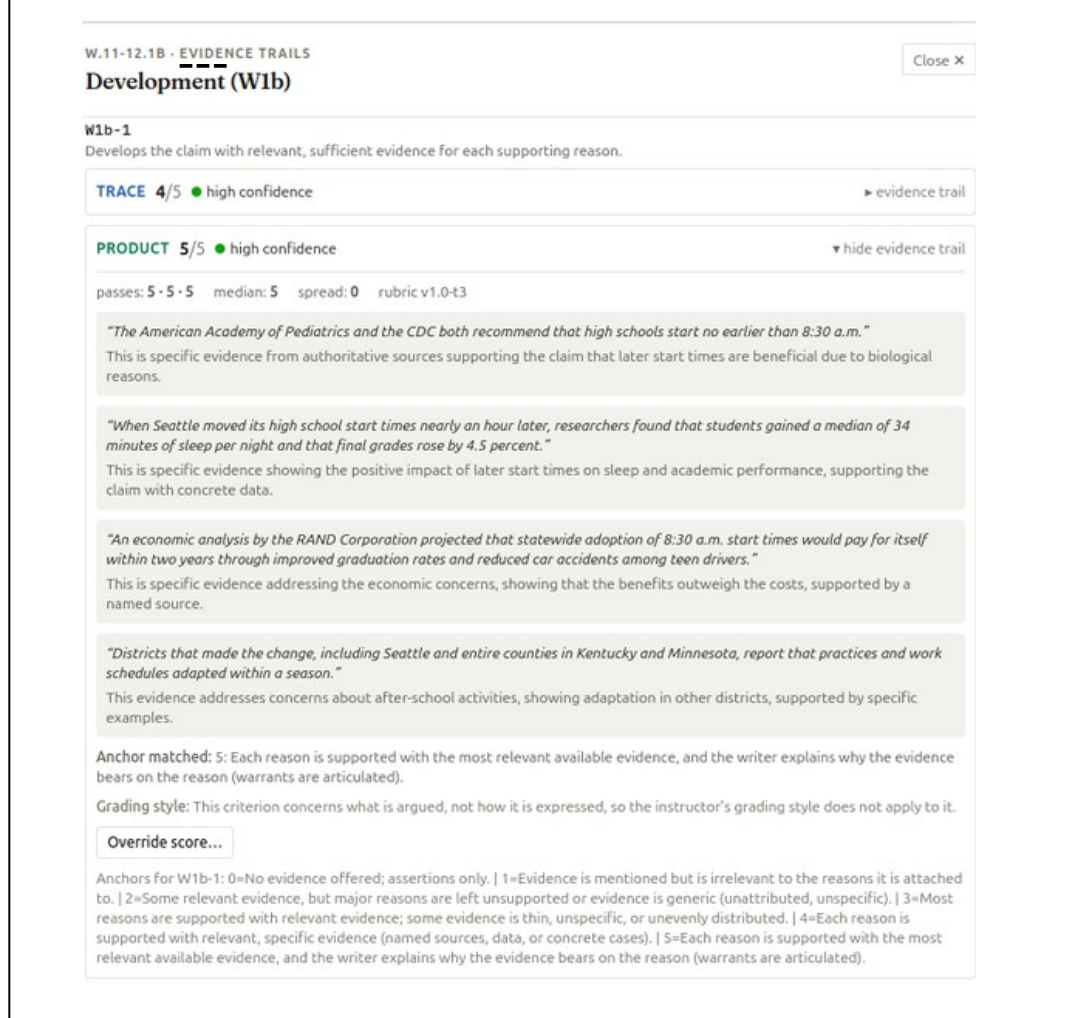

IN PROGRESS

Infers writing competence from process to product with instructor-personalized grading: free-text style molded into rubric-anchored grading, fully traceable and grounded for trust and validity.

Existing Prototype

→ allows for the system to adapt to the instructor's grading style – the system's calibration improves in proportion to its use

What's Next

Further implementation of automated feedback:
 Extend automation beyond detecting and drafting fixes to also measuring whether a published fix actually worked, closing the loop without adding manual steps.

Citation checker:
Resolve and cache each source in a paper's reference list, then use the cache as a retrieval corpus to verify in-text citation claims against source ground truth.
